

Mental health AI with wearable feedback

EEG and finger sensors bring real-time
physiological feedback into the conversation.

AI product live. Wearable feedback integration in development.

What happens during therapy goes beyond words.

Neuro brings brain and body signals into the conversation.

Words, tone and visible reactions provide context.
EEG, pulse and skin conductance add physiological measurements.

Real-time physiological feedback inside the AI session

Your words and physiological signals reach the AI together.

Early demand for the AI product

2,113

total users

\$0

spent on paid marketing

Founder-reported · July 26, 2026

Initial users: Russia, Russian language. Payments not yet enabled.

Global mental health apps market

Neuro combines AI support and wearable feedback in one membership.

Understanding the response during a session

During the session	AI psychologist No biosensors	Human psychologist No biosensors	Meditation / sleep devices Muse / Elemind	Neuro
Psychological conversation	Yes	Yes	Designed for meditation or sleep	Yes
What reveals the response	Conversation, plus voice or facial cues where supported.	Words, tone, pauses, facial expressions, movement and breathing.*	EEG. Muse also measures heart rate and breathing.	Conversation + EEG, pulse and skin conductance.
Sensor input to the conversation	No sensor measurements.	Interprets observable cues without sensor measurements.	Feedback supports meditation or sleep.	Data reach the AI in real time during the conversation.†

Psychological dialogue and physiological feedback. In one session.

* As observable in the session format. † Neuro data input: founder-reported.

One physiological signal layer

Multiple AI applications

Wearable device

EEG
Pulse

Concept stage

Consumer business, hardware and psychology in one team

Andrey Kuzmin

Co-founder & CEO

Built ENEVOO, a consumer fashion brand.

E-commerce, marketplaces and retail.
Leads product and business.

Olga Sagalaeva

Clinical Lead

35+ years of psychology practice

Created Neuro's session protocol
and safety boundaries.

Dmitriy Kareisha

Co-founder & CTO

35+ hardware projects

Built Neuro's AI system
and working device prototypes.

Yulia Litvinova

Product & Creative

IMATS New York 2015 winner

Leads product design
and AI content.

Business model

Neuro Complete

\$299 / year

Unlimited AI sessions with wearable feedback

Personal context across sessions

EEG headband + finger sensors included

Start free

3 voice sessions per month

Upgrade

AI sessions + wearable feedback

Renew

Free device update every 2 years

Proposed offer. Pricing and conversion unvalidated. Free updates require active membership.

Prototype and sensor illustration

Unit economics

\$299/year. First 12 months of a new membership.

Per new member, USD	Year 1	Year 2	Year 3	Year 4	Year 5
Annual membership revenue	299.00	299.00	299.00	299.00	299.00
Device, assembly and delivery	82.00	44.67	44.67	44.67	44.67
AI: paid and free tiers	42.00	42.00	42.00	42.00	42.00
Support and warranty	17.00	17.00	17.00	17.00	17.00
Payment processing	8.97	8.97	8.97	8.97	8.97
Customer acquisition	134.55	113.62	95.68	77.74	59.80
Contribution before fixed costs	14.48	72.74	90.68	108.62	126.56

Renewal contribution

Free device update every 2 years

\$231.03

Year without a new device

\$186.36

Year with a device update

Planning assumptions. Years indicate acquisition year. All contributions exclude fixed costs.

Packaging included. Renewal figures use planned device costs from Year 2.

Target: \$131M annual revenue in Year 5

Annual revenue, USD M

Free device updates
every 2 years included

Target scenario. \$299/year, 70% annual renewal. Paid launch M7. Years start at initial funding.

Revenue modeled over 12 months. Result before D&A, interest and tax. Further funding required.

Raising \$500k

First production batch and paid launch

Use of funds	Amount	Share	What it funds
Manufacturing	\$100k	20%	Tooling and the first 1,000 devices
Protocol and pilot	\$66k	13.2%	External protocol review and pilot evaluation
Acquisition tests	\$125k	25%	Paid-demand tests and measured CAC
Team and payroll	\$150k	30%	Product, AI, hardware and clinical team
Launch operations	\$34k	6.8%	Legal, IP, privacy and operating tools
Contingency reserve	\$25k	5%	Unexpected costs and cash timing

M6 target
Production-ready prototype

M12 target
1,000 paid members and pilot results

Additional capital required by M12 for the next production batch.

Acquisition: \$125k from this round + \$9.55k from projected sales. Customer receipts also fund ongoing costs.
